

**SAVE  
40% ON YOUR  
HEATING BILLS  
BY USING  
NOVITHERM  
HEAT  
REFLECTOR**

**MADE IN CANADA**

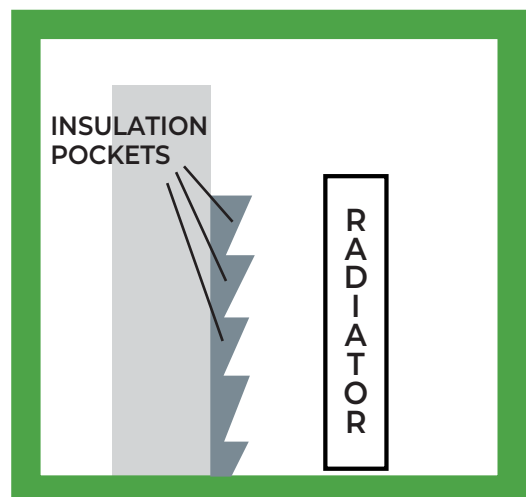

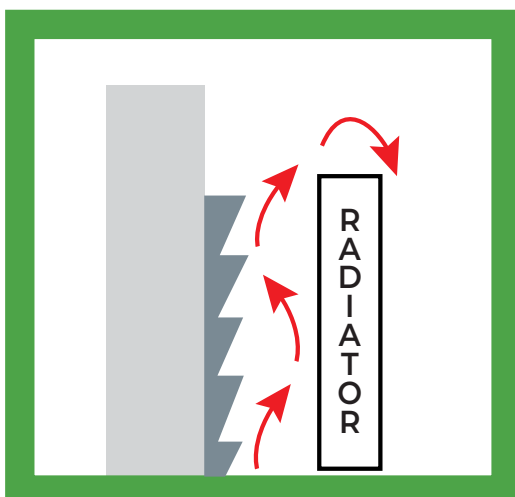

## Key Features:

- ▶ Easy to Install: No need to remove radiators
- ▶ Save energy and money: keeps heat inside
- ▶ Perfect Angle for Heat Reflection: Sends heat back
- ▶ Premium Insulation Material: Metalized PVC radiator wall insulation
- ▶ Invisible Design: Fits behind radiators without being seen

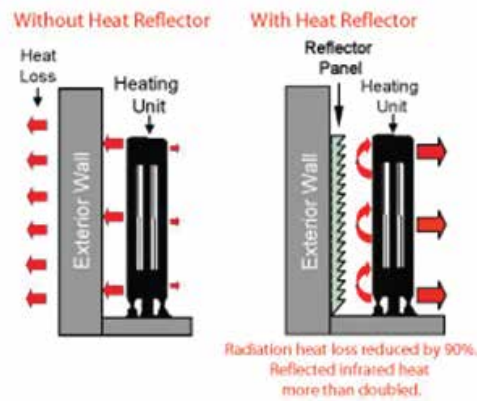

## Why install Novitherm heat reflectors:

Radiators give off heat from both the front and back. The metalized surface reflects more than 90% of the heat that walls usually take in. When you put heat reflectors behind the radiator, they send heat back into the room. This helps stop heat from leaving through the walls, which can save you up to 40% on your energy bills.

## How it works:

Novitherm Radiator Reflector Panels have a metal surface that redirects heat into the room, improving heating efficiency. Their corrugated design enhances heat circulation and reduces cold spots, while the air-trapping pockets prevent heat loss. This allows the radiator water to return to the boiler at a higher temperature, reducing fuel use and enabling a boiler temperature decrease of 7-10°C

## How to install:

Novitherm panels are designed for 60 cm radiators.

For longer or shorter radiators, the size is adjustable.

Use thermal silicone to fix the Novitherm panels to the wall behind the radiator

## Results:

Without Novitherm

With Novitherm
